

BSCSIA Course Kick Start Guide – D831

Course Applicability: D831, Introduction to AI and Security

Welcome to D831 Introduction to AI and Security. This course provides an overview of critical terminology and key concepts for artificial intelligence (AI). Learners explore the history and evolution of AI and study bias, ethical issues, and security concerns. Contextualized examples offer learners an opportunity to see these concepts in professional scenarios such as data poisoning and insider threats attacking the AI model.

Prerequisite Courses:

- None

Time to Complete

Typically, successful students complete the course in ~7 weeks.

About This Guide

This Kick Start Guide is a supplemental resource to help you get started with the course, find answers to common questions, and stay on track with assessments. You can access the primary course material by clicking the “Go To Course Material” button on your course page. Reach out to your assigned course instructor for additional guidance once assigned.

Guide Contents

What’s Required to Complete the Course

Pass the Objective Assessment (OA).

Assessment Best Practices

- Successful students carefully work through all course material and labs before attempting the Objective Assessment.
- Successful students take the pre-assessment before attempting the Objective Assessment.
- Practice thoroughly in the practice lab environment.
- Stay engaged by checking course Announcements and participating in WGU Connect for updates, reminders, and student strategies.
- WGU Connect D831 Group
- Participate in weekly Cohort events

Assessment Design

This course has 3 distinct types of assessment:

No-Stakes, Formative Assessment	Used to self-assess mastery.
Pre-Assessment	Used as a practice test for the high-stakes, summative assessment.
High-Stakes, Summative Objective Assessment	Used to measure mastery.

NO-STAKES, FORMATIVE ASSESSMENT

Review and practice opportunities are built in to support the learner on their path towards competence. There are **two** types of activities:

- **Quizzes** - located at the conclusion of each lesson, these formative assessments test the students' knowledge of the content of the lesson to help ensure competency before engaging in the final high-stakes summative objective and performance assessments.

- **Section Tests** - located at the conclusion of each section, these formative assessments test the students' knowledge of the content of the section to help ensure competency before engaging in the final high-stakes summative objective and performance assessments.

PRE-ASSESSMENT

Assessment Code: PQHO

This course uses a practice tool known as a pre-assessment that helps a student to determine their initial level of competence before taking the objective assessment.

Students should take the pre-assessment according to the course plan established between the student and their course instructor. If the student's pre-assessment results indicate lack of mastery in a specific competency, it is recommended that the student go back to all sections of the learning resource that covers that competency, not just the topic/subtopic that was used to assess the competency in the pre-assessment.

Note: The pre-assessment is not exhaustive or inclusive of all topics/subtopics that may appear on the high-stakes objective assessment. Rather, the pre-assessment reflects a sample of potential items.

HIGH-STAKES, SUMMATIVE OBJECTIVE ASSESSMENT

Assessment Code: QHO1

Competency is assessed through an **objective assessment** with 60 **items**. Students have 120 **minutes** to complete the exam.

Objective assessments (and the accompanying pre-assessments) are developed to measure competency. That is, the questions (or items) included on an objective assessment ask students about concepts reflective of the course competencies **NOT** a specific line item from a page in the learning resource.

Technology & Lab Access Requirements

To complete the practice labs, use the latest version of Google Chrome. Clear your browser cache if you experience login issues, and avoid using a VPN as it may block lab access. If you encounter technical problems, contact the WGU IT Service Desk for support. IT Helpdesk: servicedesk@wgu.edu (877) 435-7948 #1

Encouragement for Success

Students who succeed in D831 stay consistent, use the labs to practice and take the pre-assessment before taking the objective assessment. Reach out for support early if needed. Remember, this course is designed to help you build real-world skills in AI and Security. Stay engaged, pace yourself, and use the resources available; you've got this!
